Subject: ROE Indicator Update
Attachments: RE: ROE--Dietary pesticide exposures Indicator Follow-up meeting; Draft updated ROE trends; RE: ROE--Dietary pesticide exposures Indicator Follow-up meeting

CEB,

David gave me a quick update on the toxicity-adjusted dietary indicator that we put together for the report on the environment (ROE). As you may recall, we sent a revised technical document and draft text for the web version of the indicator to Pat Murphy around mid-June (see attached email). The version we sent Pat has usage data (i.e., total pounds applied) and PDP residue data up to 2015. Since February 2019, Steve has had an updated draft version of the indicator with PDP data from 2016 & 2017 (see attached email). We also received updated usage data from BEAD in June 2019, which Steve used to update the indicator with total lbs information from 2016 & 2017 (see attached email). Our plan was to update the indicator to include these more recent years of PDP and usage data once ORD completed their external review, so as to avoid delaying their review process. **Ex. 6 Personal Privacy (PP)**

Ex. 6 Personal Privacy (PP) around mid-September and that the external review of the dietary indicator had not yet started. Come mid-October, we'll schedule a follow up meeting with her team to discuss next steps. Pat also mentioned that she would also like to discuss other possible indicators. I'll keep you posted as more information becomes available. Let me know if you have any questions.

Phil
